

Power Supply 13.8V 30/35A LED VOLTMETER - Ammeter / HF RADIO / CB RADIO / CAR AUDIO

Price	75.00 Euro
Availability	Always on stock
Shipping time	24 hours

Product description

The power supply is configured for amateur radio applications. 13.8V maximum current: 30A peak current up to 35A.

Two displays: one shows the current current draw in amps, and the other displays a voltmeter showing the current output voltage.

High power output, quiet, low-noise fans, and operates when needed.

This power supply is ideal for HF or CB radios. It has been professionally configured to work with radio communication devices and therefore does not cause interference.

The voltage is set to exactly 13.9V, which is the optimal voltage for powering HF or CB radios. For safe operation, we set it to around 13.9V, and to ensure a small margin :)

A photo of the multimeter is attached.

This device is brand new. You are guaranteed that the product is original and new!

Our devices are 100% new.

Metal banana sockets, which carry up to 90A of current.

Dimensions are approximately 24cm x 8.5cm x 4cm.

Weight: 1 kg.

I've used it with radios such as the Kenwood TS2000, TS590, Yaesu FT2000, and many other HF radios.

It easily supports ribbon CB radios: Lincoln, Jackson, Alan 87, etc., as well as amplifiers.

The power supply fan speed has been adjusted to adjust to the temperature, making it virtually inaudible during operation.

It has warranty seals, so there's no need to worry about it stopping working, for example, after a month, as is often the case.

Included with the original Dell power cable - 3x0.75mm² or 3x1mm² (A good quality cable that doesn't cause interference with the mains costs about 15 PLN).

A more expensive 60A power supply is also available in my other listing.

Remember, you're buying from a licensed amateur radio operator!

Each power supply is tested before shipping on Yaesu FT2000 and FTDX101 radios! It's also tested on SDRs to ensure it doesn't cause interference in the HF band!

You're buying from a legally operating company!

73!
